My Dream Stack

Posted on June 5, 2018 by Jonathan Steele

Hello Everyone! I just wanted to share with you my Dream Stack. This is what I'll be working towards. I think this is a really powerful stack for a lot of reasons. I'm excited to work on this with you all!

1. AWS / GCP (some sort of Cloud Platform)
2. **Docker (transfers great to cloud platforms)**
3. **MySQL/PostGreSQL (MySQL for Django and PG for Flask)**
4. **Django/Flask + Python (Backend)**
5. **SKLearn / TensorFlow / Keras / CNTK / Theano, etc (Machine Learning Libraries)**
6. Angular / React (Not my focus now, React would be a plus)

June 8, 2018 at 3:15 pm   Edit

I added Flask and Postgres on June 8th 2018 because I'm pretty interested in MicroServices as well. I think those are really valuable, so I'm going to learn those as well. I might replace Django/MySQL with them in a bit.
